S1 Fig. CIRR: all 30-species pairs at 8X

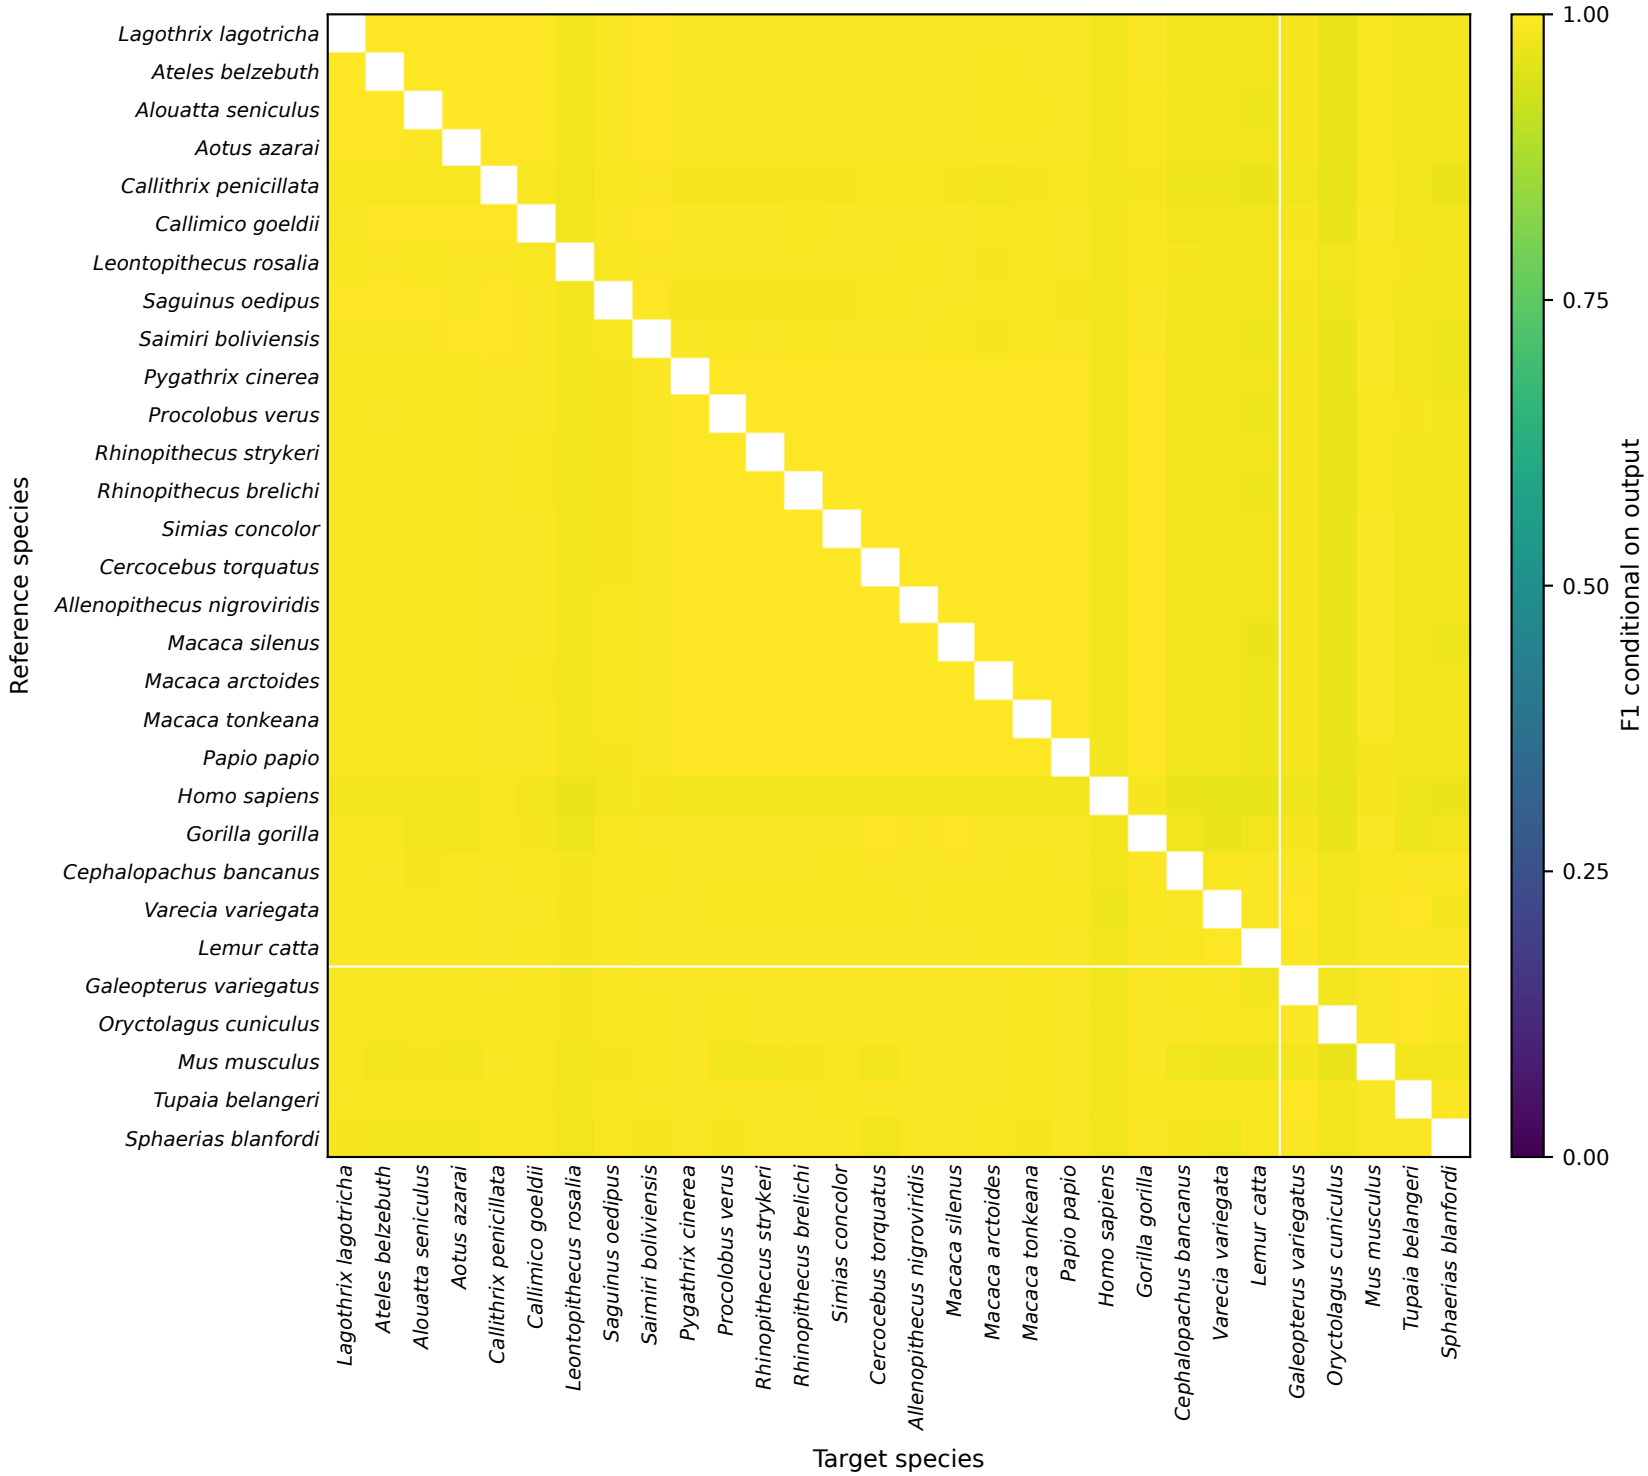

2,610 / 2,610 jobs returned output; three attempts per off-diagonal cell.

Color: mean F1 among outputs. Gray ×: no output. White diagonal: not attempted.
Digits 1 or 2: number of outputs where fewer than three replicates completed.
Species order follows the benchmark panel; the white separator marks the five non-primates.

S1 Fig. CIRR-Hybrid: all 30-species pairs at 8X

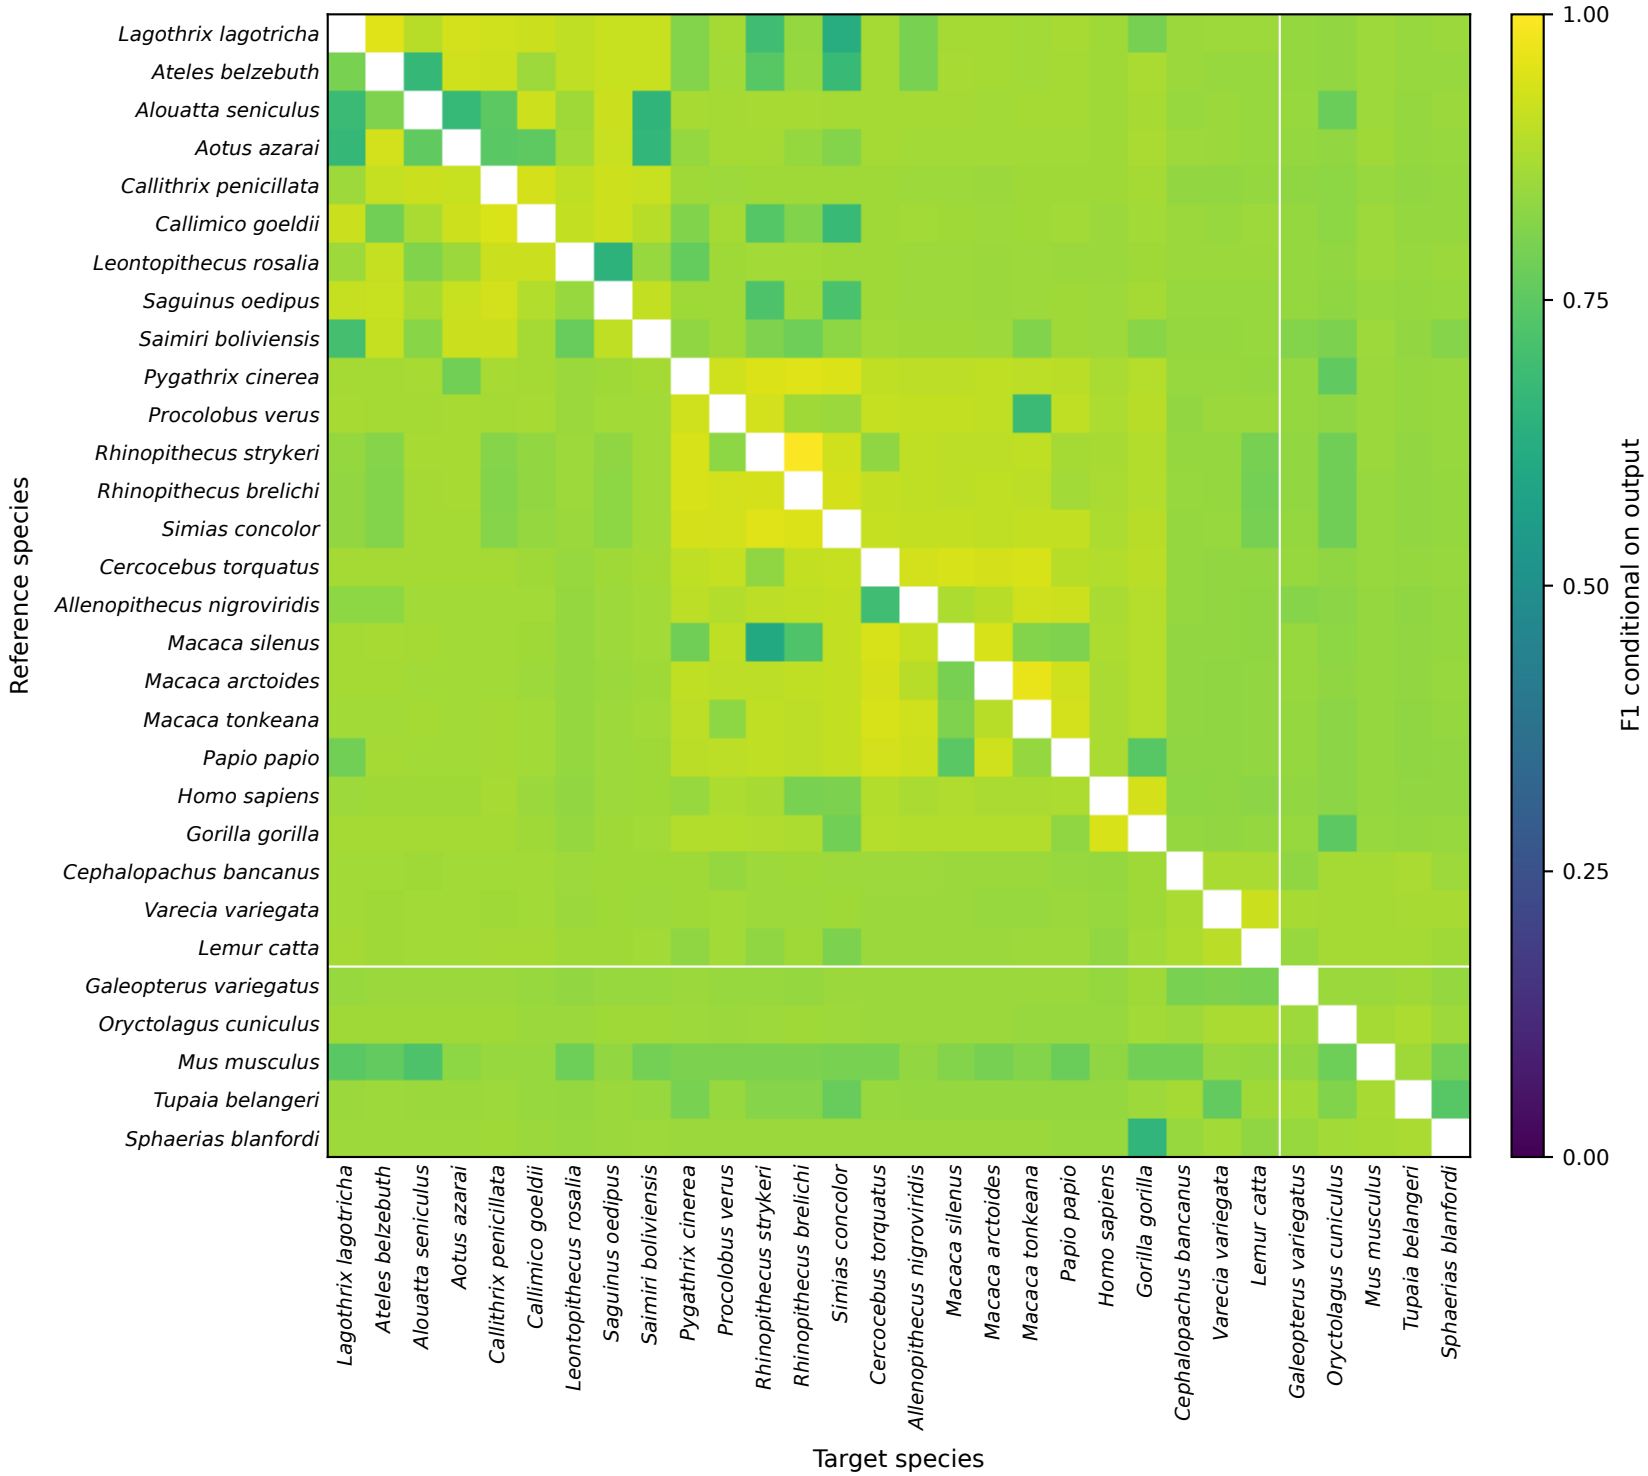

2,610 / 2,610 jobs returned output; three attempts per off-diagonal cell.

Color: mean F1 among outputs. Gray ×: no output. White diagonal: not attempted.
Digits 1 or 2: number of outputs where fewer than three replicates completed.
Species order follows the benchmark panel; the white separator marks the five non-primates.

S1 Fig. SRSC: all 30-species pairs at 8X

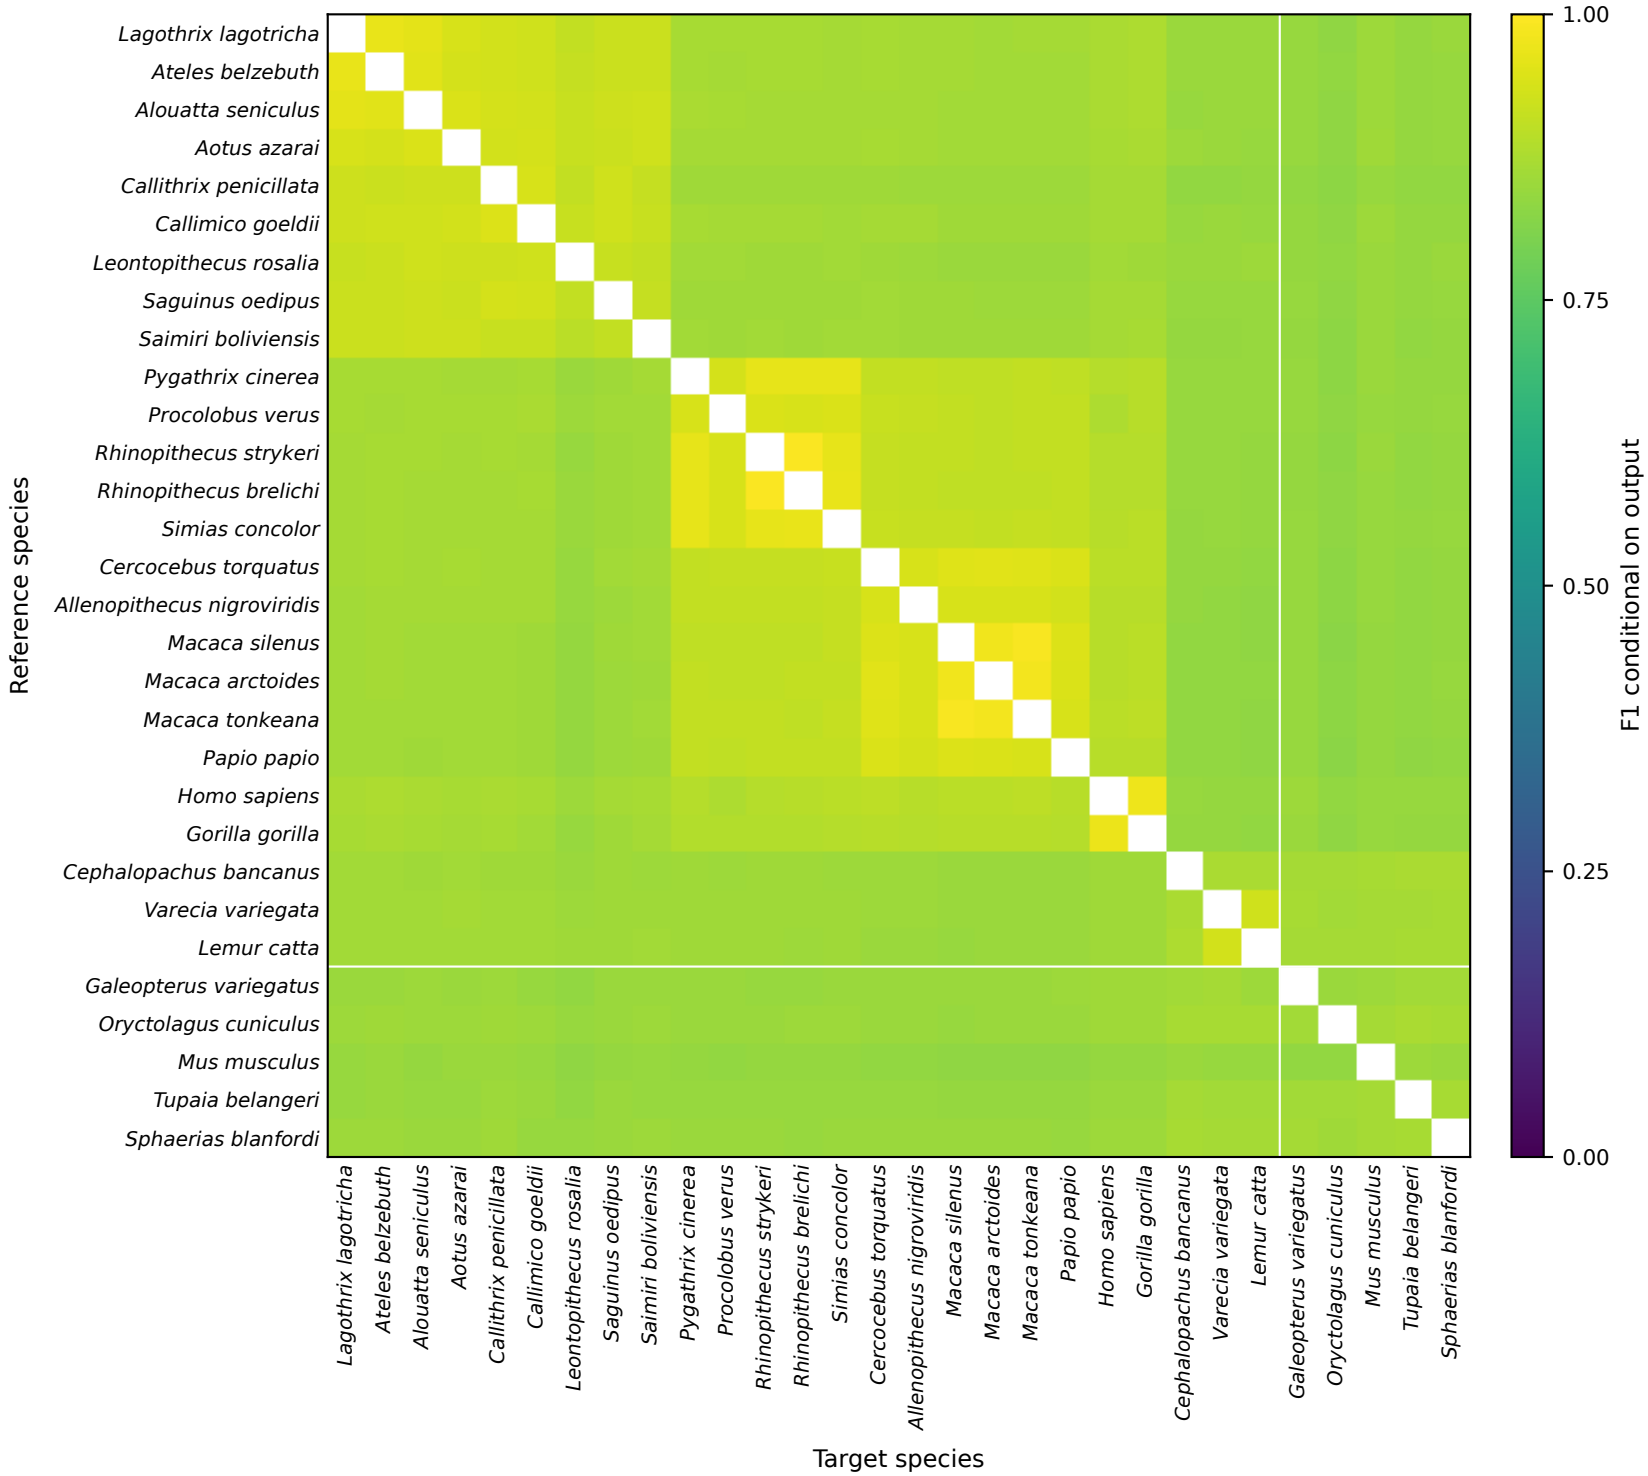

2,610 / 2,610 jobs returned output; three attempts per off-diagonal cell.

Color: mean F1 among outputs. Gray ×: no output. White diagonal: not attempted.
Digits 1 or 2: number of outputs where fewer than three replicates completed.
Species order follows the benchmark panel; the white separator marks the five non-primates.

S1 Fig. Pilon: all 30-species pairs at 8X

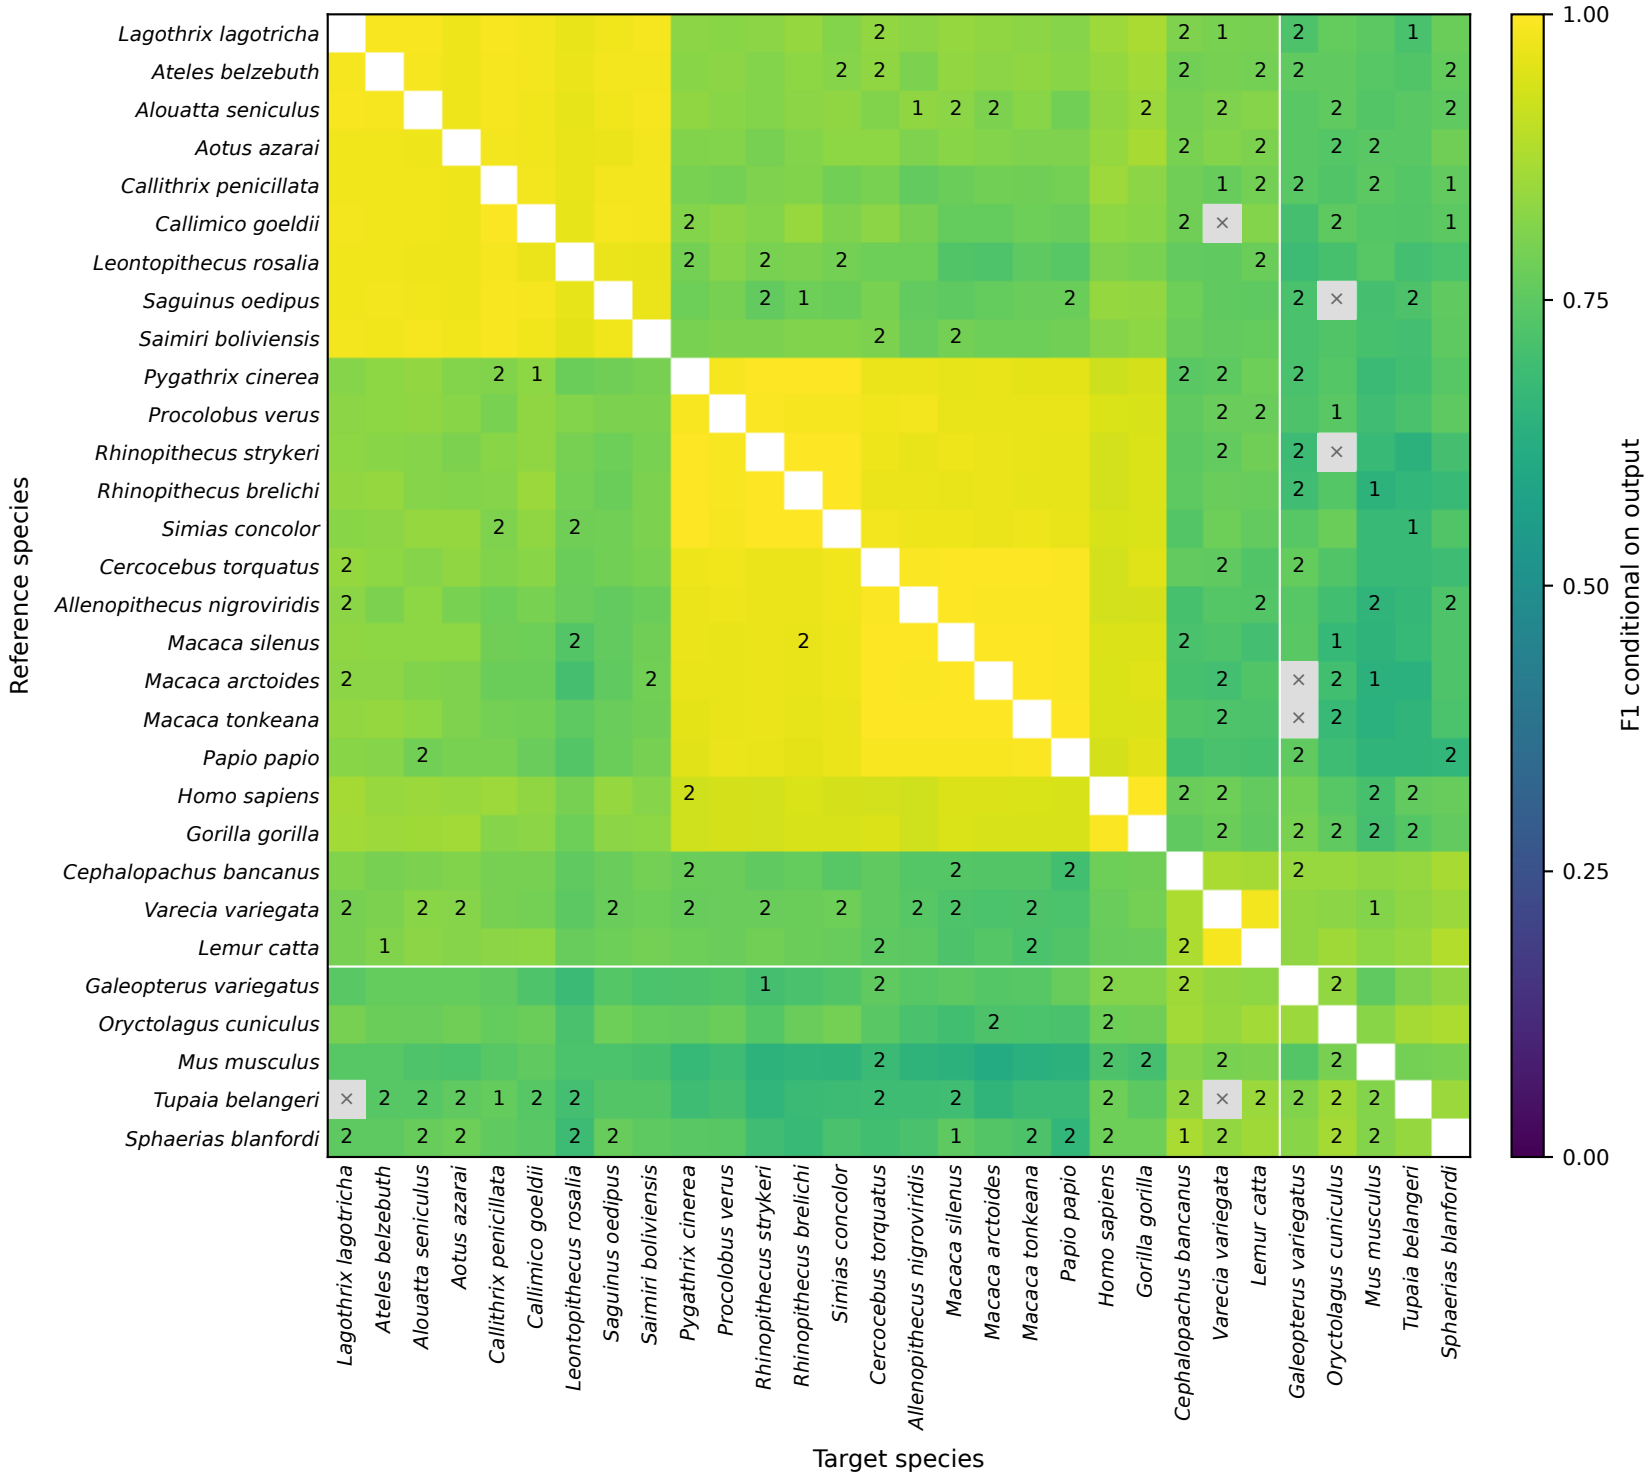

2,610 / 2,610 jobs returned output; three attempts per off-diagonal cell.

Color: mean F1 among outputs. Gray ×: no output. White diagonal: not attempted.
Digits 1 or 2: number of outputs where fewer than three replicates completed.
Species order follows the benchmark panel; the white separator marks the five non-primates.

S1 Fig. MIA: all 30-species pairs at 8X

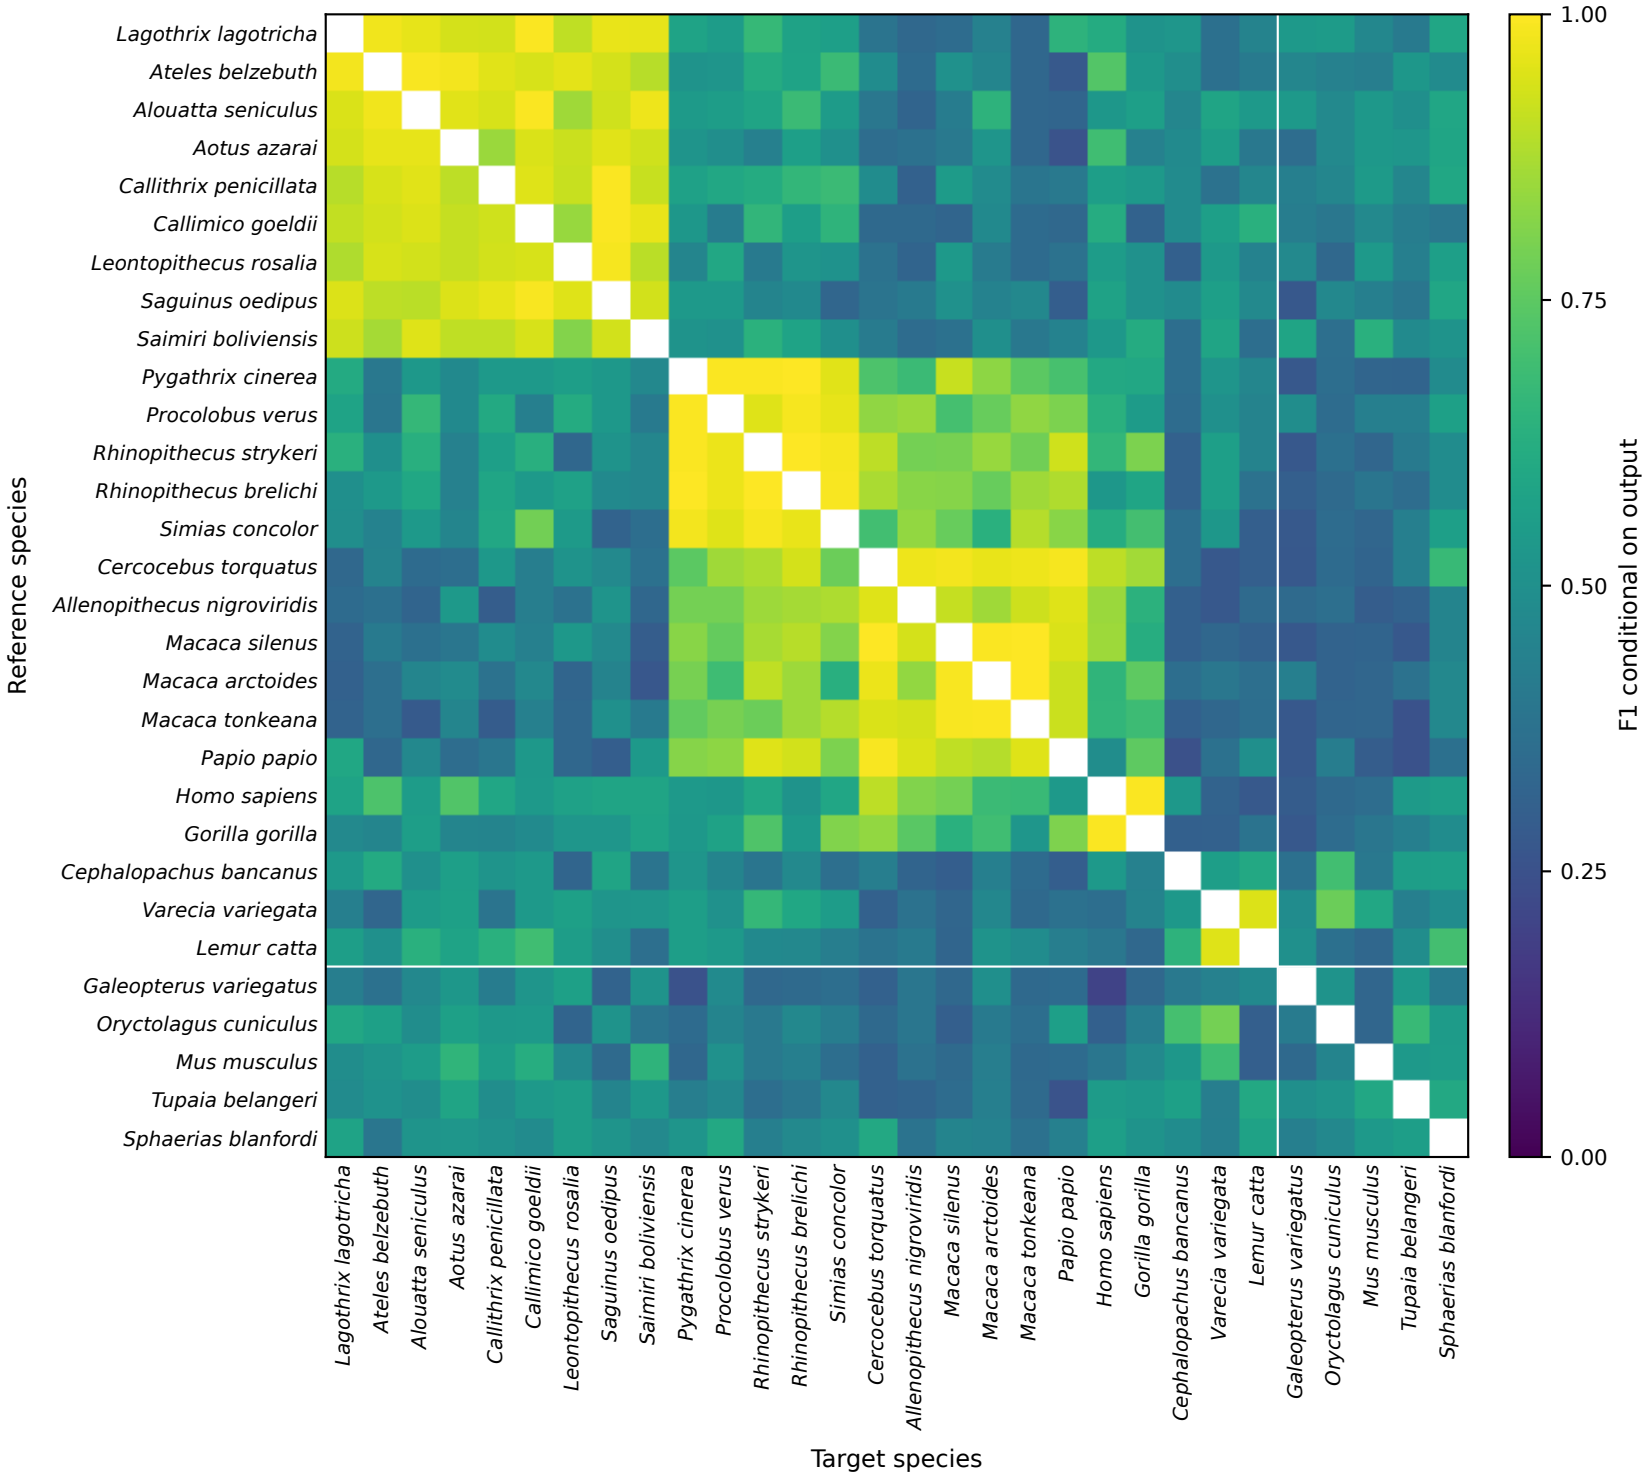

2,424 / 2,610 jobs returned output; three attempts per off-diagonal cell.

Color: mean F1 among outputs. Gray ×: no output. White diagonal: not attempted.
Digits 1 or 2: number of outputs where fewer than three replicates completed.
Species order follows the benchmark panel; the white separator marks the five non-primates.

S1 Fig. MITObim: all 30-species pairs at 8X

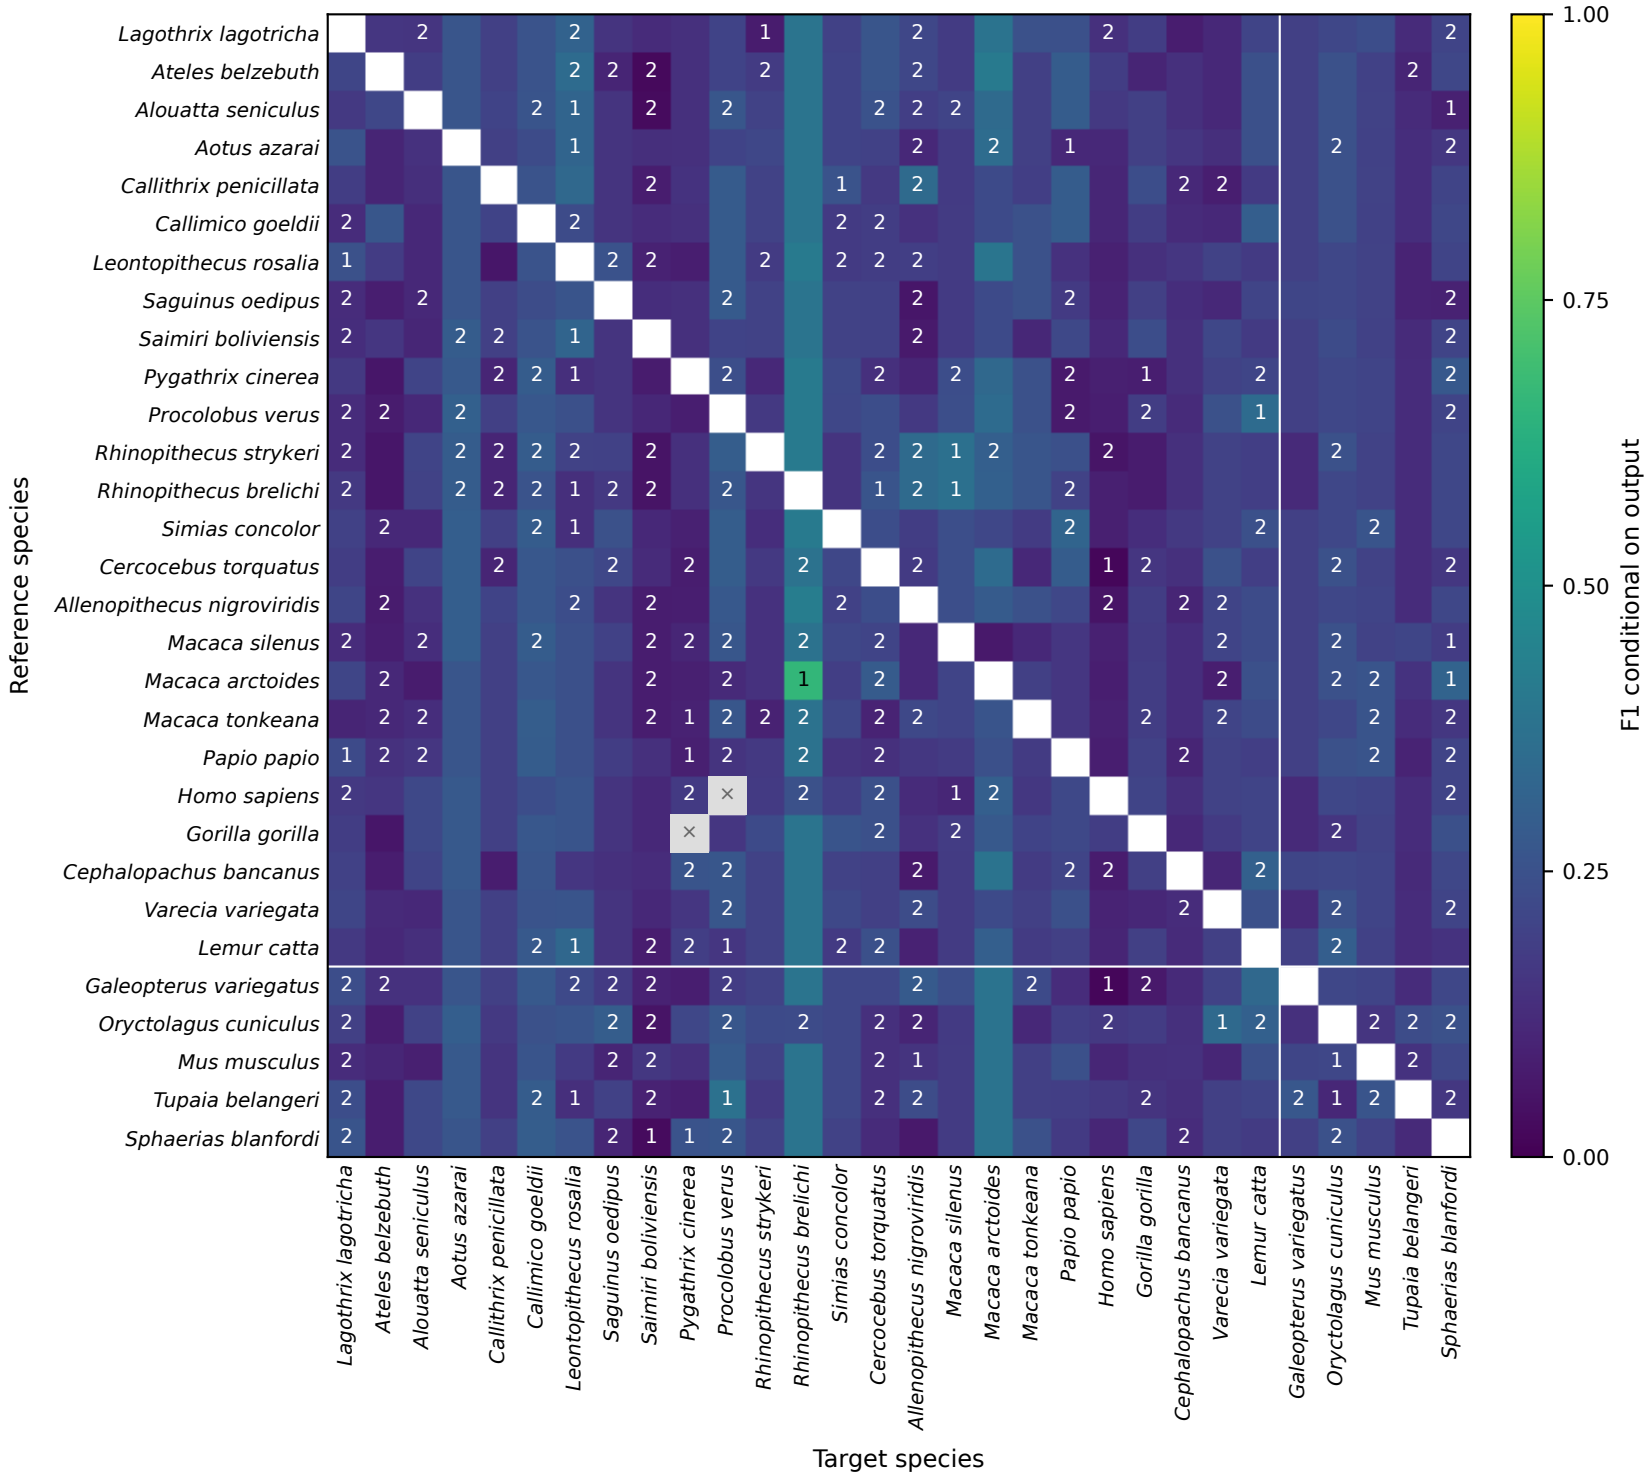

2,610 / 2,610 jobs returned output; three attempts per off-diagonal cell.

Color: mean F1 among outputs. Gray ×: no output. White diagonal: not attempted.
Digits 1 or 2: number of outputs where fewer than three replicates completed.
Species order follows the benchmark panel; the white separator marks the five non-primates.

S1 Fig. NOVOPlasty: all 30-species pairs at 8X

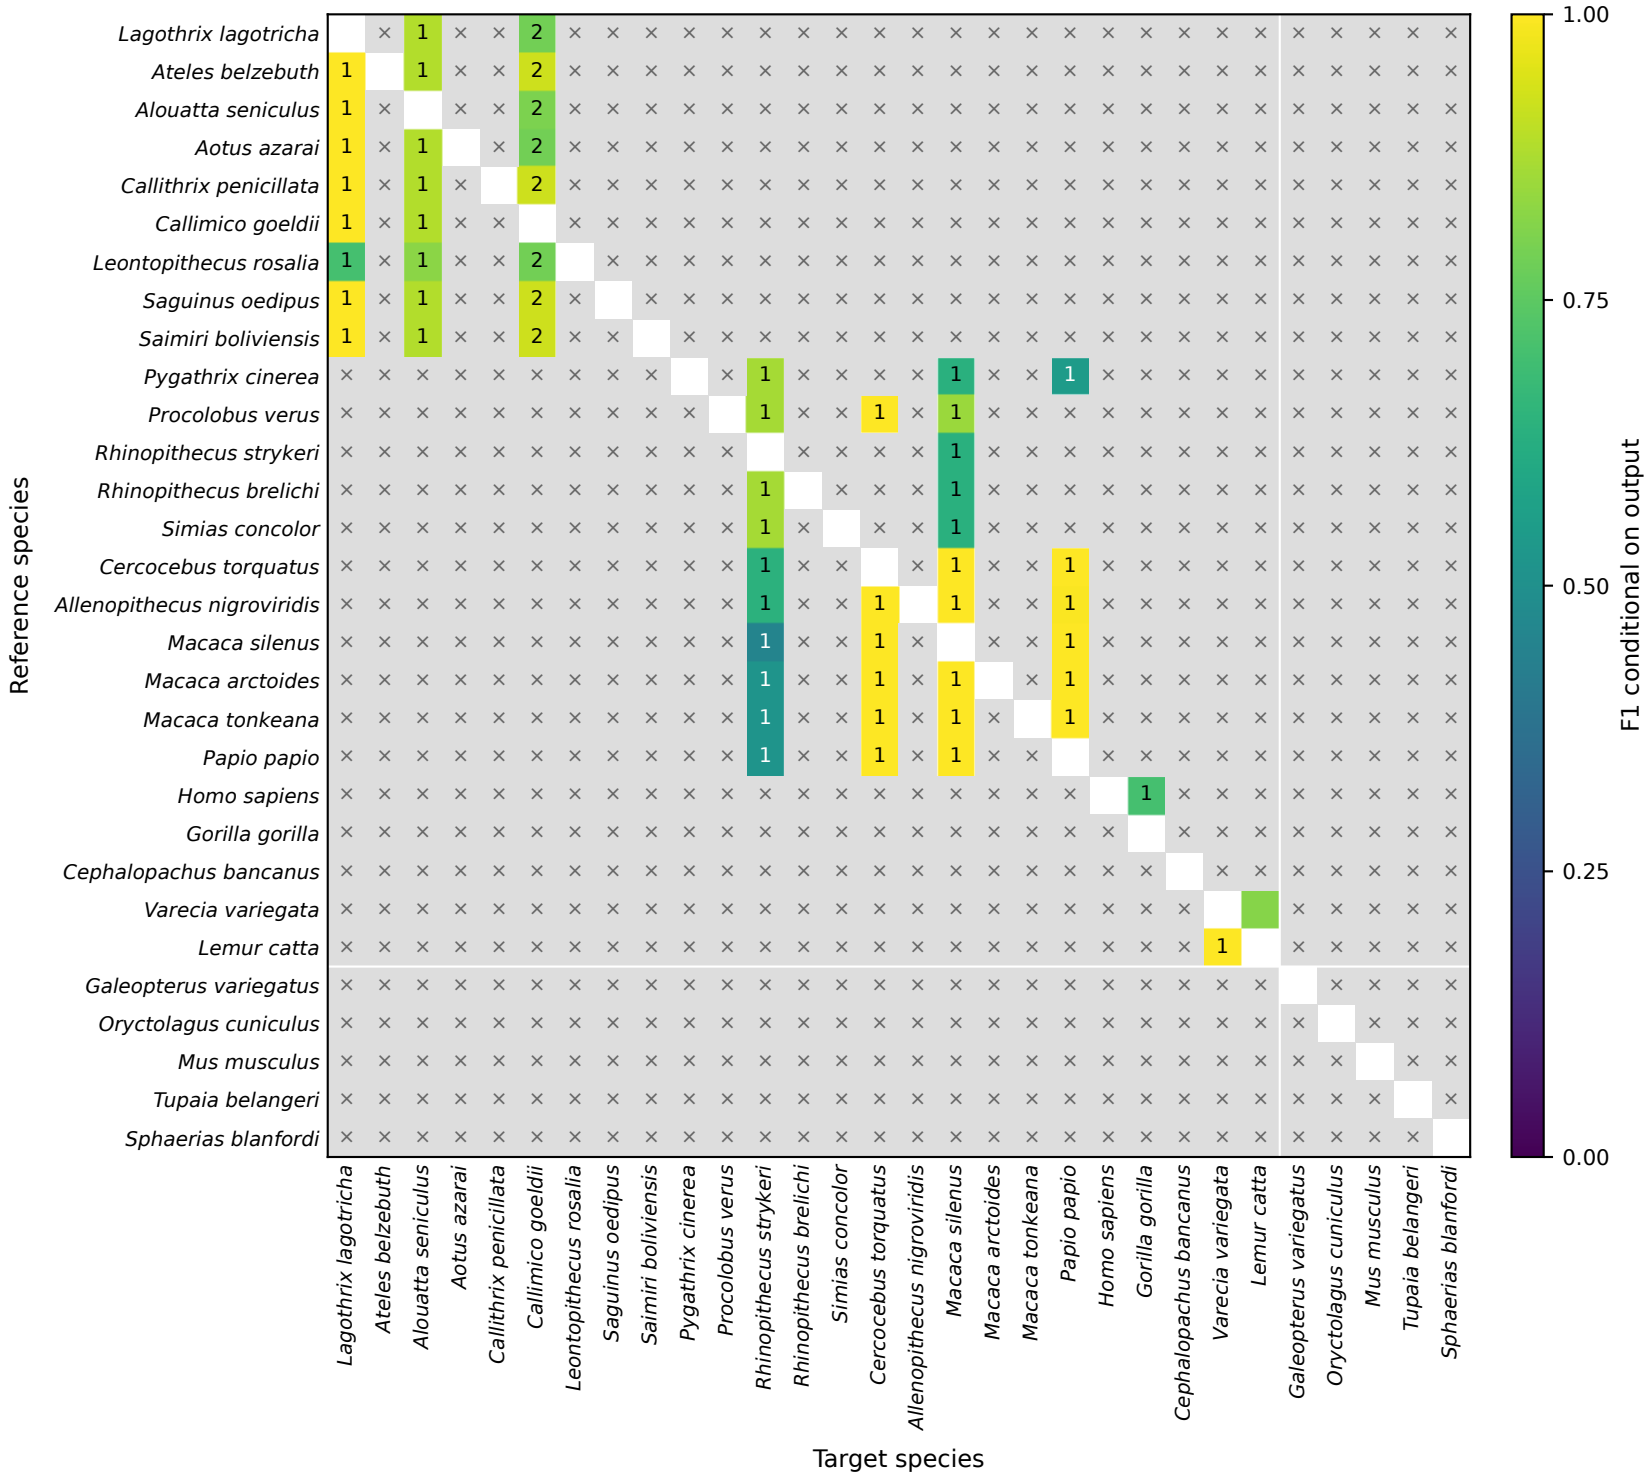

2,331 / 2,610 jobs returned output; three attempts per off-diagonal cell.

Color: mean F1 among outputs. Gray ×: no output. White diagonal: not attempted.
Digits 1 or 2: number of outputs where fewer than three replicates completed.
Species order follows the benchmark panel; the white separator marks the five non-primates.

S1 Fig. GetOrganelle: all 30-species pairs at 8X

69 / 2,610 jobs returned output; three attempts per off-diagonal cell.

Color: mean F1 among outputs. Gray ×: no output. White diagonal: not attempted.
Digits 1 or 2: number of outputs where fewer than three replicates completed.
Species order follows the benchmark panel; the white separator marks the five non-primates.
